

We can't upgrade some Premier files

The new AccountRight now has all of the features available in classic AccountRight Premier, with the exception of M-Powered Payments.

You can now upgrade most multi-currency files in 2019.2 and later. For all the details, see [Upgrade a Premier multi-currency company file](#).

[Learn more about working with multiple currencies.](#)

What to do if you can't upgrade yet. If you're happy to start fresh, [install the new AccountRight](#) and [create a new company file](#). (As a Premier user, you can have two files in the cloud.) If this isn't ideal for you, continue using AccountRight v19 until you can upgrade. If you can't upgrade, you might need an [ATO deferral from Single Touch Payroll reporting](#).

Using AccountRight Enterprise?

[Multiple inventory locations](#) is now available in AccountRight Premier 2019.2 onwards.

If you use **negative inventory**, this isn't supported in the latest version of AccountRight. If you adjust your inventory quantities and values to zero or greater, you can turn off negative inventory and it won't prevent you from upgrading.

If you need to continue using **negative inventory**, give us a call to discuss your options (Australia 1300 793 130, or New Zealand 0800 60 69 62).
